Thesis Data Appendix

The following data files contain every variable actually consumed by the analysis
notebooks in this thesis. Raw data variables and those that weren't utilized during ML/DL training are excluded.

File	Path	Rows	Columns
ML — Real movie features	`ml_dataset/data/model_ready/movie_success_v6/movie_features_v6.csv`	10	323
ML — Synthetic movie features	`ml_dataset/data/model_ready/movie_success_v6/movie_features_v6_synthetic.csv`	40	324
ML — Real scene/movie metadata	`ml_dataset/data/model_ready/movie_success_v6/scene_movie_metadata_v6.csv`	10	20
ML — Synthetic scene/movie metadata	`ml_dataset/data/model_ready/movie_success_v6/scene_movie_metadata_v6_synthetic.csv`	40	20
DL — Synthetic movie features	`ml_dataset/data/model_ready/movie_success_v7/movie_features_v7_synthetic.csv`	10,000	324
DL — Synthetic scene/movie metadata	`ml_dataset/data/model_ready/movie_success_v7/scene_movie_metadata_v7_synthetic.csv`	10,000	20

> The full raw CSV files for all retained entries are bundled as `thesis_data_appendix.zip` alongside this PDF. Each per-file section below shows the first and last sample rows and the complete column list after the analysis trim has been applied.

DATA FILE

ML — Real movie features

ml_dataset/data/model_ready/movie_success_v6/movie_features_v6.csv | 10 rows × 323 columns (after trim) | 4 columns dropped by analysis trim

Movie-level features for the 10 real Emognition films. Each row aggregates physiological signals (heart rate, electrodermal activity, peripheral skin temperature, accelerometry) and scene-aligned summaries across the 43 participants who watched the corresponding clip. Used as the real-data half of the n = 50 corpus used for regression and classification models.

DATA FILE

ML — Synthetic movie features

ml_dataset/data/model_ready/movie_success_v6/movie_features_v6_synthetic.csv | 40 rows × 324 columns (after trim) | 7 columns dropped by analysis trim

40 synthetic movies generated by Gaussian-copula augmentation from the joint distribution of the 10 real films. Concatenated with the real file above to form the n = 50 augmented corpus.

First 5 rows — first 8 columns

DATA FILE

ML — Real scene/movie metadata

ml_dataset/data/model_ready/movie_success_v6/scene_movie_metadata_v6.csv | 10 rows × 20 columns (after trim) | 9 columns dropped by analysis trim

Scene properties and movie-level metadata for the 10 real films (targeted emotion, clip duration, audiovisual structure, genre, release year, country of origin, categorical budget bracket) plus the outcome variables extracted as regression targets.

First 5 rows — first 8 columns

movie_id	targeted_emotion	clip_duration_s	cut_count	brightness	motion_intensity	audio_loudness	silence_ratio

DATA FILE

DL — Synthetic scene/movie metadata

ml_dataset/data/model_ready/movie_success_v7/scene_movie_metadata_v7_synthetic.csv | 10,000 rows × 20 columns (after trim) | 10 columns dropped by analysis trim

Metadata for the 10,000 synthetic films generated.

First 5 rows — first 8 columns

movie_id	targeted_emotion	clip_duration_s	cut_count	brightness	motion_intensity	audio_loudness	silence_ratio
SYN_M001	NEUTRAL	68	low	moderate	moderate	high	high
